

INTRODUCING ALUCOBOND® COOL

3A Composites, maker of the world's leading ACM, is proud to offer a new paint finish technology that provides higher solar reflectivity, potential energy savings and reduced air conditioning costs.

Offered in a broad spectrum of colors, Alucobond Cool finishes also provide:

Longer-lasting color life and chalk resistance

Superior corrosion resistance

Exceptional chemical, humidity and salt-spray resistance

With proven environmental advantages over non-cool finishes and products, Cool technology already qualifies for LEED credits in roofing applications, and similar certifications are expected for its use in vertical applications.

The finishes require little maintenance, and most surface contaminants can be removed using conventional detergents or cleaning solvents.

FINISH SYSTEMS

Alucobond Cool Systems are created utilizing a color and a PVDF (polyvinylidene fluoride) finish system, which is now standard for many PVDF colors at no additional cost. Darker PVDF colors not qualifying for Cool technology will remain available.

Call your Alucobond representative for a sample, or check out more information at AlucobondUSA.com.
